

Statement on the restriction of PFAS

(As of: July 2026)

In the course of the current discussion on the regulation of per- and polyfluoroalkyl substances (PFAS), we would like to comment on possible effects on our products.

According to the current state of knowledge, our products are not affected by any PFAS chemicals. Nevertheless, we are closely monitoring regulatory developments and are in close contact with our suppliers to ensure that our products continue to comply with applicable regulations in the future.

As PFAS comprises a very heterogeneous group of substances and regulatory requirements can evolve, a potential future impact cannot be ruled out with absolute certainty. In this context, we are constantly examining alternatives and focusing on sustainable solutions to minimize potential risks to the environment and health.

We take our responsibility to customers, partners and the environment very seriously and will continue to take all necessary measures to ensure compliance with legal requirements.
